JAVIER PÉREZ

FRONTEND & MOBILE DEVELOPER | SOFTWARE ENGINEER

Tokyo, Japan • j.perezurrutia@gmail.com • github.com/peladno • linkedin.com/in/javier-perez-u

VISA STATUS: Spouse Visa (日本人の配偶者等) — Unrestricted Work Authorization (Full-time eligible, no sponsor required)

LANGUAGES: Japanese (JLPT N3 / Conversational & Dev) • English (Professional / IELTS 5.5) • Spanish (Native)

PROFESSIONAL SUMMARY

From culinary precision to software craftsmanship — building clean, resilient, and user-centric digital experiences. Software developer living and programming in Tokyo, actively strengthening systems foundations in C and Python at 42 Tokyo, with a solid professional background developing cross-platform mobile apps in React Native and responsive web applications in

TECHNICAL SKILLS

- **Systems & Core:** C (Memory Management, Pointers, Algorithms), Python, TypeScript, JavaScript (ES6+), Java, Kotlin
- **Frontend & Mobile:** React, React Native, Expo, Redux / Redux Toolkit, Tailwind CSS, Material UI, HTML5, CSS3 / Sass
- **Backend & Database:** Node.js, Express, REST APIs, MongoDB, PostgreSQL, SQLite, Firebase Authentication
- **Tools & Methodologies:** Git & GitHub, Docker, Agile (Scrum / Jira), Hexagonal Architecture, UNIX / Linux Environment

WORK & ENGINEERING EXPERIENCE

Software Engineering Student | 42 Tokyo — **04/2026 — Present • Tokyo, Japan**

- Rigorous low-level systems programming in C: manual memory management, pointer arithmetic, custom data structures, and UNIX architecture.
- Developing automated Python scripts and utility tools within an intensive peer-to-peer, project-driven curriculum.

Mobile Developer | Unity SPA — **03/2022 — 03/2023 • Remote / Santiago, Chile**

- Engineered, tested, and maintained cross-platform mobile application 'MINT' using React Native, Expo, and Redux state management.
- Integrated RESTful APIs and external SDKs; improved application performance, rendering responsiveness, and code maintainability.
- Collaborated with cross-functional engineering team to debug technical issues, implement UI designs, and conduct peer code reviews.

Frontend Developer | DevSafio Incubator — **12/2022 — 02/2023 • Remote**

- Developed modular frontend architecture and reusable UI components for an employment platform connecting junior developers with tech roles.
- Coordinated agile sprint delivery, stand-ups, and pull request reviews using Scrum methodology, Jira, Docker, and Git.

FEATURED ENGINEERING PROJECTS

Inventory Mobile App (React Native, Redux, Expo, SQLite, Firebase) github.com/peladno/inventory-reactNativeApp

- Cross-platform inventory management mobile application featuring offline-first SQLite local storage and Firebase Cloud authentication.
- Designed clean UX workflows for product cataloging, barcode scanning, category filtering, and real-time state synchronization.

E-Commerce Web Platform (E-Shop) (React, Node.js, Express, MongoDB) github.com/peladno/eshop-project

- Full-stack e-commerce web platform with dynamic catalog browsing, multi-criteria filtering, shopping cart, and custom REST API endpoints.
- Implemented secure user workflows, product management administration, and scalable document database schemas in MongoDB.

Shared Calendar API (Node.js, Express, TypeScript, PostgreSQL) github.com/dlab-team/c6-frontend

- Modular backend API for collaborative calendar scheduling, architected with Hexagonal Architecture (Ports and Adapters).
- Ensures high domain decoupling, extensive unit testability, dependency injection, and clean database integration with PostgreSQL.

42 Tokyo Systems & Algorithms Modules (C, Unix, Python) github.com/peladno

- Implemented standard C library functions from scratch (libft), custom printf, push_swap sorting algorithm, and pipex IPC pipeline handling.
- Adheres strictly to the 42 Norm formatting standards with zero memory leaks verified through Valgrind / Leaks sanitizers.

EDUCATION & CERTIFICATIONS

Software Engineering Curriculum — 42 Tokyo **2026 — Present**

- Peer-to-peer intensive engineering curriculum focusing on systems programming, memory safety, C, and Python.

React JS & Web Development Certifications — Coderhouse **2022 — 2023**

- Comprehensive coursework in JavaScript (ES6+), React JS component architecture, and modern web application development.

Gastronomy & Culinary Management — Duoc UC **2009 — 2013**

- Professional background instilling strong discipline, high precision, attention to detail, and methodical work ethics.

WORK AUTHORIZATION & LANGUAGES

- Japan Visa Status: Spouse of Japanese National Visa (日本人の配偶者等) — Permanent resident pathway. Full legal authorization to work in Japan with zero visa sponsorship requirement and no restrictions on job category or hours.
- Japanese (日本語): JLPT N3 certified. Living and coding in Tokyo; capable of technical documentation reading and conversational workplace discussions.
- English: Professional working proficiency (IELTS 5.5). Experienced in technical documentation, code reviews, and remote international team collaboration.
